ISOSHEAR® - very sensitive to your vibration problems.

Sensitivity and isolation combined in a single transducer - that's the ISOSHEAR accelerometer. Endevco has put together the best of two concepts, physical isolation and stacked piezoelectric crystals in shear mode. Together they provide sensitivities up to 1000 picocoulombs per g, and near total isolation from base strain and transient thermal effects.

The resulting signal-to-noise ratio is maximal, the data you get is dependable. And these accelerometers are so versatile you can probably reduce your transducer inventory to one type - ISOSHEAR. Available in top and side connector versions, grounded and floating. Contact your local Endevco Field Engineer or our home office for ISOSHEAR data. Endevco D.I.D., Rancho Viejo Road, San Juan Capistrano, CA 92675. Telephone: 714/493-8181.
